

CS150 Lab 5 Notes

Christian Hollar

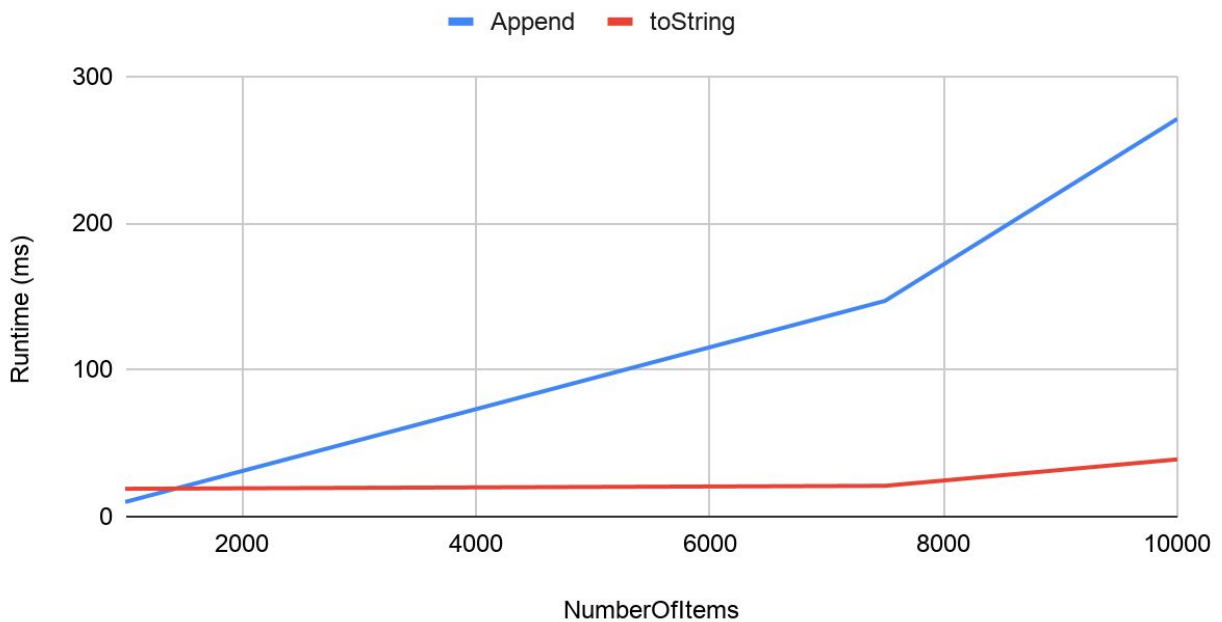

9/20/20

Introduction

This lab contains classes Cell, IntegerListADT, IntegerList, and Experiment Controller. The purpose of this lab was to create duplicate methods from the original class that utilizes an abstract class. The abstract class is IntegerListADT. The methods included are append and toString. toString returns a string of objects of the instance of the class, and append adds an integer to this list.

Unit Tests

Append vs. toString Runtime

NumberOfItems	Append	toString
1000	10	19

7500	147	21
10000	271	39

Required Output

No required output

Trouble Report

Everything works!
